

Application

- Data Center & Networking Equipment
- Servers/Storage Devices
- High Performance Computing (HPC)
- Switches/Routers
- Telecom Central Offices (CO)
- Test And Measurement Equipment

Standards Compliance

- Compliant with OSFP MSA Rev 4.1
- Compliant with QSFP-DD MSA Rev 4.1
- Compliant QSFP-DD-Hardware-Rev7.0
- Compliant with IEEE 802.3cd
- I2C for EEPROM communication
- Compliant with CMIS 5.0
- SFF-TA-1031, FF-8665, SFF-8661, SFF-8679, SFF-8636

Highlight

- Support 8x56G PAM4
- 400G To 8*50G Data Rate
- 3.3V Power Supply
- Hot Pluggable
- Excellent SI Performance
- RoHS Compliance
- Simplifies The Patching And Offers A Cost-Effective Way For Short Links

1.0 General Description

This datasheet pertains to the **OSFP 400G to 8*SFP56 50G Active Redriver Copper Cable Assembly**, meticulously designed for application in the telecommunications and data center sectors. It facilitates bi-directional transmission of 400Gb traffic per cable, accommodating 8 lanes of 56G PAM4. The cable adheres to the standardized OSFP/OSFP-RHS & SFP28(56) form factor and complies rigorously with Multi-Source Agreement (MSA) specifications.

Note1:

Labeling as inputs (I) and outputs (O) are from the perspective of the module

Note2:

The case makes electrical contact to the cage before any of the board edge contacts are made.

Note3:

The module signal ground contacts, VeeR and VeeT, should be isolated from the module case.

Note4:

Tx_Fault is a module output that when high, indicates that the module transmitter has detected a fault condition related to laser operation or safety. If Tx_Fault is not implemented, the Tx_Fault contact signal shall be held low by the module and may be connected to Vee within the module.

Rx_LOS when high indicates an optical signal level below that specified in the relevant standard. Rx_LOS is an open drain/collector output, but may also be used as an input by supervisory circuitry in the module.

Note5:

Tx Disable is an input contact with a 4.7 k Ω to 10 k Ω pullup to VccT inside the module.

Note6:

The SFP+ 2-wire interface specifications are given in 4.2 2-WIRE ELECTRICAL SPECIFICATIONS. This specification ensures compatibility between host masters and SFP+ SCL/SDA lines and compatibility with I2C. All voltages are referenced to VeeT.

Note7:

Mod_ABS is connected to VeeT or VeeR in the SFP+ module. The host may pull this contact up to Vcc_Host with a resistor in the range 4.7 k Ω to 10 k Ω . Mod_ABS is asserted "High" when the SFP+ module is physically absent from a host slot. In the SFP MSA (INF-8074i) this contact has the same function but is called MOD_DEF0.

Note8:

RS0 and RS1 are module inputs and are pulled low to VeeT with > 30 k Ω resistors in the module. RS0 optionally selects the optical receive signaling rate coverage. RS1 optionally selects the optical transmit signaling rate coverage.

The SFP+ module provides two inputs RS0 and RS1 that can optionally be used for rate selection. RS0 controls the receive path signalling rate capability, and RS1 controls the transmit path signalling rate capability
