

Application

- Data Center & Networking Equipment
- Servers/Storage Devices
- High Performance Computing (HPC)
- Switches/Routers
- Telecom Central Offices (CO)
- Test And Measurement Equipment

Standards Compliance

- Compliant with QSFP-DD MSA Rev 4.1
- Compliant QSFP-DD-Hardware-Rev7.0
- Compliant with SFP-DD MSA
- Compliant with IEEE 802.3ck
- Compliant with IEEE 802.3cd
- I2C for EEPROM communication
- Compliant with CMIS 5.0
- SFF-TA-1031,FF-8665, SFF-8661, SFF-8679, SFF-8636

Highlight

- Support 8x106.25G PAM4
- 800G To 8*100G Data Rate
- 3.3V Power Supply
- Hot Pluggable
- Excellent SI Performance
- RoHS Compliance
- Simplifies The Patching And Offers A Cost-Effective Way For Short Links

1.0 General Description

This datasheet pertains to the **QSFP-DD800 800G to 8*SFP112 100G Direct Attached Copper Cable Assembly**, meticulously designed for application in the telecommunications and data center sectors. It facilitates bi-directional transmission of 2*100Gb traffic per cable, accommodating 8 lanes of 100G PAM4. The cable adheres to the standardized QSFP-DD&QSFP112 form factor and complies rigorously with Multi-Source Agreement (MSA) specifications.

2.0 Product Specification

2.1 Absolute Maximum Ratings

Parameter	Unit	Min.	Max.	Notes

Note 1:

QSFP-DD uses common ground (GND) for all signals and supply (power). All are common within the QSFP- DD module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane. Each connector GND contact is rated for a steady state current of 500 mA.

Note 2:

VccRx, VccRx1, Vcc1, Vcc2, VccTx and VccTx1 shall be applied concurrently. Supply requirements defined for the host side of the Host Card Edge Connector(see MSA specification). For power classes 4 and above the module differential loading of input voltage pads must not result in exceeding contact current limits. Each connector Vcc contact is rated for a steady state current of 2000 mA

Note 3:

Reserved pad recommended to be terminated with 10 kΩ to ground on the host. Pad 65 (No Connect) Shall be left unconnected within the module, optionally pad 65 may get terminated with 10 kΩ to ground on the host.

Note 4:

Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 1A, 2A, 3A, 1B, 2B, 3B. Contact sequence A will make, then break contact with additional QSFP- DD pads. Sequence 1A and 1B

will then occur simultaneously, followed by 2A and 2B, followed by 3A and 3B

Note 5:

Full definitions of the P/VSx signals currently under development. For module designs using programmable/vendor specific inputs P/VS1 and P/VS4 signals it is recommended each to be terminated in the module with 10 kΩ. For host designs using programmable/vendor specific outputs P/VS2 and P/VS3 signals it is recommended each to be terminated on the host with 10 kΩ.

Note 6:

For host not implementing ePPS/Clock, it is not necessary to parallel terminate the ePPS/Clock signal to ground on the host. ePPS/Clock already has parallel termination in the module.

<p>Note1: SFP112 uses common ground (GND) for all signals and supply (power). All are common within the SFP112 module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signalcommon ground plane.</p>					
<p>Note2: VccR, VccT shall be applied concurrently. Requirements defined for the host side of the Host Card Edge Connector are listed in Table 11. VccR and VccT may be internally connected within the module in any combination. The connector Vcc pins are each rated for a maximum current of 1000 mA.</p>					
<p>Note3: Plug Sequence specifies the mating sequence of the host connector and module. The sequence is 0, 1, 2, 3.</p>					
<p>Note4: Support to configure TXFault/IntL will be provided in future CMIS revisions 5.1.</p>
